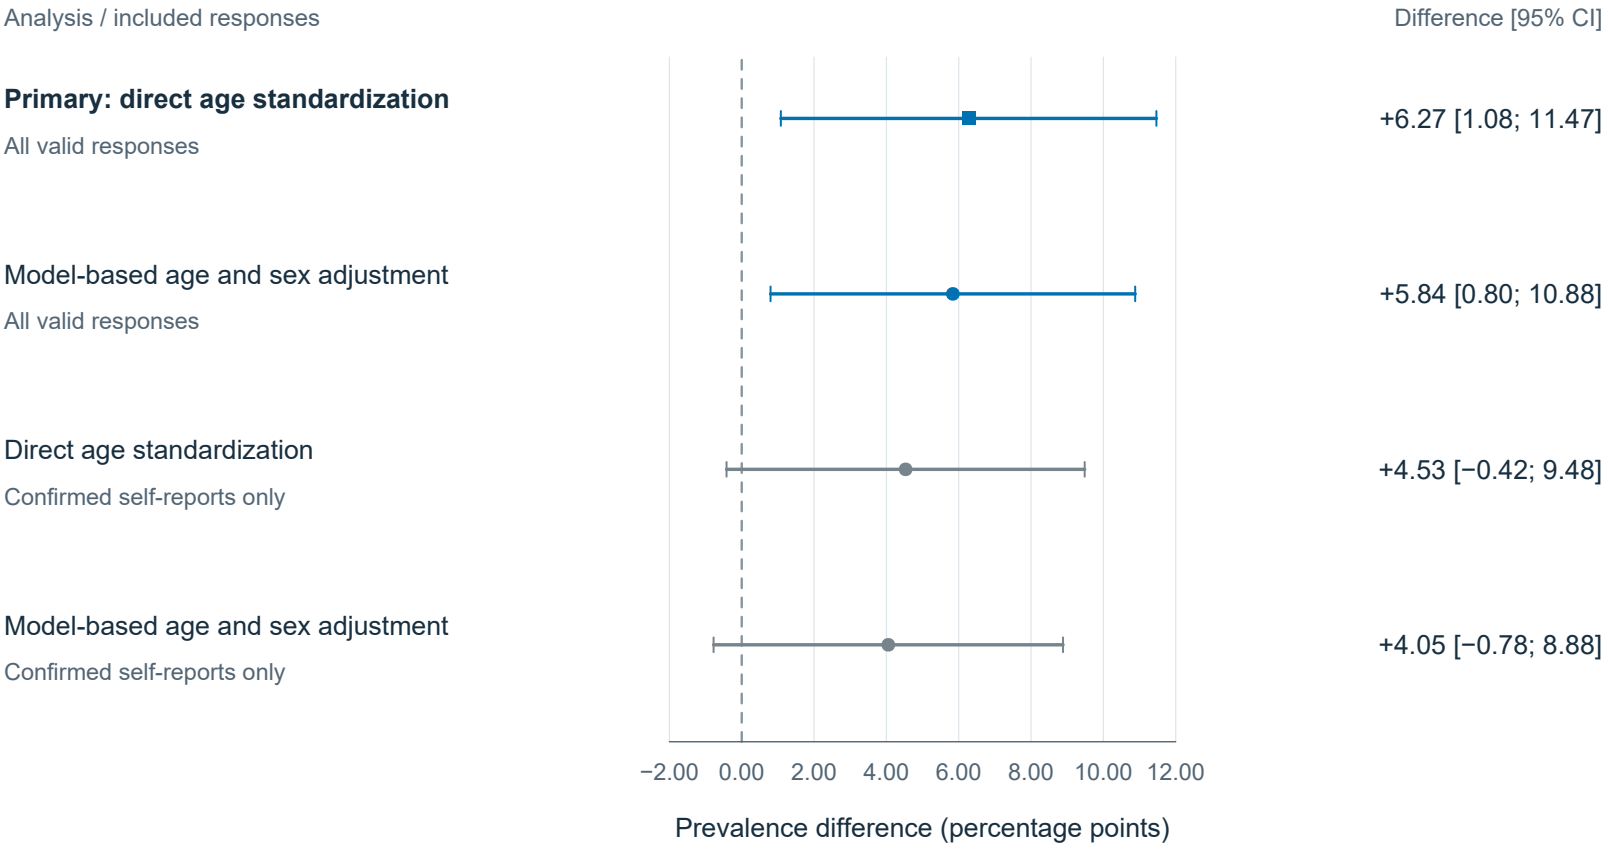
Stroke-group comparison across analysis methods

Swallowing difficulties at age 65+: prevalence in 2025 minus 2022



Age: US 2000 standard. Adjusted margins: fixed 50:50 sex distribution within age groups.

Extensions are post-hoc; confirmed self-report restriction changes the target population.

Source: NCHS, NHIS 2022 and 2025; authors' calculations. Survey design accounted for.
